

ANUJ BANSAL

Senior Software Engineer

+918319986413 | anuj.bansal16@gmail.com | anujbansal16 | anujbansal16

SUMMARY

Senior Software Engineer with over **6+ years** of experience in distributed systems and building scalable consumer products. Expertise in system design, scalability, performance optimization, and cost effective solutions. Proven track record of leading cross-functional initiatives, and delivering critical features with a strong focus on quality reliability, security, and developer productivity.

WORK EXPERIENCE

Swiggy

March 2021 – Present — Bengaluru

Software Engineer III

October 2024 – Present

- **System Scale & Platform Ownership:** Serve as the sole owner of the high-throughput Reminder Service, managing onboarding, capacity planning, and platform stability for **80+ internal clients** at a collective scale of **30,000 requests per minute (RPM)**.
- **Order Recovery:** Built a core **order monitoring service** that detects order delays, triggers corrective actions, and ensures proactive customer communication—impacting **5% of overall orders**.
- **Tech Simplification:** Leading tech simplification for my team. Optimized 5+ services, reduced Deployment Units and associated infrastructure from 15 to 10, and achieved **\$2K+/month in cost savings**.
- **Track Page Widgetization:** Led the end-to-end architecture for a widgetized track screen, **decoupling the UI** from app releases to accelerate experimentation and unlock monetization. Streamlined the backend by **refactoring 200K+ lines of code to just 30K, boosting execution speed by 35%**.
- **Move to India (MTI) Migration:** Orchestrated a zero-downtime multi-region migration (Singapore to Mumbai) for owned services. **Coordinated across 10+ teams** to manage the Kafka topology migration for **16 producer services**, along with MySQL, Redis, and DynamoDB components encompassing **115 APIs**.
- **Item-Level IGCC (Instamart):** **Rebuilt the Instamart claims framework** from flat categories to a parent-child item-level model, migrating legacy MySQL to DynamoDB Tables **to scale and track 4.5M+ refund policies**.
- **Rule Engine Unification:** Spearheaded the **migration of 1,500+ legacy Food Recommendation rules** from Drools to a unified Tree-based Rule Engine V2 across Food and Instamart, **eliminating deployment overhead** and saving 2 dev-days per integration.
- **Leadership, Collaboration & Talent Development** Acted as the primary liaison between Product, Design, Business, and Analytics Marketing teams to align priorities and develop sprint plans and quarterly roadmaps for the team. **Mentored 4 engineers**, led hiring efforts, and established **technical standards** to build a high-performing team

Software Engineer II

April 2022 – October 2024

- **Bulk Food Split Orders:** Architected the tech solution to split bulk food orders and assign them to multiple Delivery Executives (DEs). This structural change **reduced Expected Delay (ED) from 8.6% to 4.3% and lowered the overall cancellation rate to 1.2%**.
- **CCC & Pre-Order Flink Streaming:** Designed and developed the Customer Churn (CCC) framework that calculates **the real time churn score** of the customer due to the preorder and post order egregious experiences and prioritizing the affected customers with dedicated agents, priority DE assignments which drove **5,000 incremental Orders Per Day (iOPD)**.
- Built an automated post-placement monitoring solution that cut average order cancellation delays from **37 to 29 minutes** and **boosted customer reordering by 10%** via automated IGCC discount gratification.

Software Engineer I

March 2021 – March 2022

- Engineered a rate-limited DynamoDB **script to bulk-update over 400+ order cancellation reasons**, cutting manual **operational updates from 1-2 hours to 10 mins**. Reused the script multiple times for new order types.
- Identified and resolved a major order status Push Notification silent failure impacting Express orders. Implemented targeted observability metrics and fixes that drove an **18% reduction in customer support chats over a two-week validation period**.

- **Config-Driven Operations:** Integrated the configuration platform with the DE (Delivery Executive) nudge system. Enabled product ops to **modify highly dynamic business properties** (e.g., toggling assistance tickets) **without service redeployments**.

SAP Labs

September 2020 – March 2021 — Bengaluru

Associate Developer

- Overhauled a **multi-tenant service broker's quota system** to support multiple regions — adding region-aware API routing, per-region credential resolution, and Kubernetes-level region tagging for accurate quota enforcement — enabling a single broker deployment to serve multiple regions, with full backward compatibility.

Accenture Solutions Pvt. Ltd

July 2017 – June 2018 — Pune

Associate Software Engineer

- Built a Salesforce application for General Electric (GE) Healthcare.

TECHNICAL SKILLS

Languages & Frameworks: Java, Golang, C++ , Python, SpringBoot, Django (Beginner)

Databases: AWS DynamoDB, PostgreSQL, Redis, MySQL, Elasticsearch

Messaging: Kafka, SQS, SNS

Monitoring/Dashboard: Grafana, Prometheus, Tooljet, Retool

Developer Tools: Git, Docker, Visual Studio, IntelliJ, Eclipse

EDUCATION

Master of Technology, Computer Science Engineering

July 2018 – July 2020

International Institute of Information Technology, Hyderabad (Gold Medalist)

GPA: 9.76

Bachelor of Technology, Information & Technology

July 2013 – July 2017

Institute of Engineering And Technology, DAVV, Indore

83.94%
